TITLE: SHADOW MASK FOR A CATHODE RAY TUBE

THE COMMISSIONER FOR PATENTS
P.O. Box 1450
Alexandria, VA 22313-1450

AMENDED CLAIMS

1. (currently amended) A shadow mask in which throughholes are formed, each of said throughholes having a rear side hole portion through which an electron beam enters and a front side hole portion through which the electron beam is emitted so as to form a beam spot having a prescribed shape on a surface to be irradiated;

wherein, each of said throughholes has a ridge portion formed by intersection of an inwardly tapered surface of said rear side hole portion and a taper surface of said front side hole portion;

wherein each of the throughholes at the front and rear side hole portions is circularly shaped;

wherein the front side portion of the throughholes is shifted toward the outer peripheral side of the shadow mask relative to the rear side hole portion;

the taper size $T (= (S - Q)/2)$ as an average value of the individual portions of the taper surfaces which is represented by a value a half the difference between the hole width S at the end of said front side hole portion and the hole width Q at said ridge portion is within a range of from 30 to 40% of the thickness of said shadow mask; and

said ridge portion is formed at a sectional height of up to 35 μm

from the end of said rear side hole portion.

2. (currently amended) A shadow mask according to claim 1, wherein the taper size T as an average value of the individual portions of the taper surfaces in the a peripheral portion of said shadow mask is within a range of 30 to 40% of the thickness of said shadow mask.
